TIME

Family Note Today your child explored ways to solve number stories using division. In the stories below the total number of objects is given, so your child needs to find either the number in each group or the number of groups. If needed, help your child count out pennies or dried beans to match the total in each story and use them to act out the story.

Please send in an unopened, 1-liter bottle of water for use in an upcoming lesson on measuring mass.

Please return this Home Link to school tomorrow.

Draw pictures to help you solve each number story.
Record your answers.

- ① Connie has 18 toys to put away. She puts 6 toys in each basket.
How many baskets does she use?

_____ baskets

- ② Jamal is bagging prizes for the school fair. There are 30 prizes and Jamal wants to put 3 prizes into each bag. How many bags did Jamal make?

_____ gift bags

- ③ Think of things at home that could be shared equally by your family.
Record them on the back of this page.
- ④ Write a number story about equally sharing one of the things you wrote for Problem 3. Use the back of this paper. Then solve your number story.
