

Solving a Multistep Number Story, Part 1

Lesson 2-4

NAME

DATE

TIME

Read the number story. Use the Snacks Vending Machine Poster on *Student Reference Book*, page XXX for prices.

Diego buys raisins and granola. If he has \$1, how much change should he get back?

Study one way to solve the problem.

$$100 - 45 = 55$$

$$55 - 40 = 15$$

Diego should get 15¢ back.

Show a different way to solve the problem. Keep track of your thinking by writing number models. You may also use pictures, situation diagrams, or other representations.
